FOR IMMEDIATE RELEASE

HealthDataViz Joins Forces with CHOP's NJ Safety & Health Outcomes Center to Launch Innovative Traffic Safety Website

Boston, MA, May 25, 2023

HealthDataViz is excited to share the outcome of their year-long partnership with Children's Hospital of Philadelphia's (CHOP's) NJ Safety & Health Outcomes Center (NJ-SHO) and NJ Division of Highway Traffic Safety. Together, they launched njsho.chop.edu, a cutting-edge website featuring interactive dashboards and resources aimed at promoting traffic safety, transportation equity, and injury prevention across New Jersey.

The innovative platform provides a wide range of evidence-based resources designed to drive positive change in traffic safety throughout the state. Users can leverage the interactive data dashboards to visualize, monitor, and track critical traffic safety measures within their communities, with the goal of reducing road fatalities and injuries over time.

HealthDataViz's collaboration with the NJ-SHO Center for Integrated Data has transformed the way traffic safety data is collected, integrated, analyzed, and shared in New Jersey. Using the innovative NJ-SHO Data Warehouse and partnering with CHOP's team, HealthDataViz has developed user-friendly dashboards that offer unprecedented access to vital traffic safety information. These tools empower communities and policymakers with the insights needed to implement effective safety measures and reduce the burden of traffic-related injuries and fatalities.

Founded in 2013, HealthDataViz, LLC (HDV) has been dedicated to delivering cutting-edge data analytics, visualization design, development, and training for healthcare and public health organizations. HDV team's extensive expertise and deep understanding of healthcare and public health topics has equipped them to complete over 225 projects and deliver over 150 training programs to help organizations communicate the story in their data.
